Supported by Science.

According to several research studies, lowfat chocolate milk is an effective post-workout recovery drink. Some research even suggests milk may help **restore and maintain hydration better** than water or certain sports drinks. See the science for yourself at refuelwithchocolatemilk.com.

YOUR WORKOUT'S DONE. YOUR BODY ISN'T.

Simple *and* effective.

Chocolate milk. What could be simpler? It's **delicious**, it's **affordable** and, above all, it gets the job done. Drink lowfat chocolate milk as part of your post-workout recovery routine.

- PROTEIN** to help build muscle
- CARBS** to refuel muscles
- ELECTROLYTES** to replenish what's lost in sweat
- FLUIDS** to help rehydrate the body

Milk's always had it.
They have to add it.

Lowfat chocolate milk has what it takes to help you recover after a hard workout. It naturally offers high-quality protein and **key electrolytes like calcium, potassium, sodium and magnesium**, which most sports drinks add in the lab. The more sports drink companies try to innovate, the more they start to resemble the nutrient mix and vitamin/mineral profile **milk has had all along**.

During a strenuous workout, muscle tissue can break down. It's the **rebound**, the **rebuilding**, that has you coming back stronger next time. For that **you need protein** in your recovery routine.

Not *just*
PROTEIN.
HIGH-QUALITY
PROTEIN.

Most sports recovery beverages add protein. But **milk is a natural source** of high-quality protein. And with lowfat chocolate milk, you get the **right mix of protein and carbs** to refuel exhausted muscles. High-quality fuel for a high-quality recovery.

**DON'T SETTLE
FOR LESS.**

You've worked out too hard to turn back now. Get the benefits you deserve with Nature's Recovery Drink, **lowfat chocolate milk**.
